

Use of the Standard Material Transfer Agreement (SMTA) of the International Treaty on Plant Genetic Resources for Food and Agriculture by the International Livestock Research Institute (ILRI)

ILRI maintains a collection of almost 19,000 accessions of forage germplasm as a global public good in the genebank in Addis Ababa, Ethiopia. Most of the germplasm was acquired prior to the entry into force of the Convention on Biological Diversity. Any material acquired after the entering into force of the Convention on Biological Diversity was obtained with the understanding that it could be made available for any agricultural research, breeding and training purposes under the terms and conditions set out in the agreement between ILRI and FAO dated 26 October 1994. On 16 October 2006, ILRI signed an agreement with the Governing Body of the International Treaty on Plant Genetic Resources for Food and Agriculture (the Treaty) placing these in trust collections of forage germplasm within the purview of the Treaty.

In accordance with this agreement, all shipments from ILRI of forage germplasm of those crops listed in Annex 1 to the Treaty (under the Multilateral System <http://www.planttreaty.org/>) are subject to the terms and conditions of the Standard Material Transfer Agreement (SMTA). The SMTA is a private contract with standard terms and conditions ensuring that the relevant provisions of the Treaty are followed by individual providers and recipients of plant genetic material. The SMTA is also used for the transfer of forage germplasm other than those listed in Annex 1 of the Treaty and covered under the agreement between ILRI and the Governing Body. Very few forage species are included in the multilateral system and most of the germplasm maintained in the ILRI genebank is covered under the agreement between ILRI and the Governing Body.

ILRI makes germplasm available under the terms of the SMTA as part of its policy of maximizing access to the material for research, breeding and training and also in keeping with the CGIAR Principles on the Management of Intellectual Assets ([CGIAR IA Principles](#)) and the [ILRI IA Policy](#). ILRI uses the 'shrink-wrap' type of agreement where the SMTA is shipped along with the material. By accepting the parcel and seeds, the recipient signifies acceptance of the terms of the agreement. No actual signature is required. Recipients may also distribute the germplasm to other parties provided such distribution to other parties is also made and accepted under the terms and conditions of the SMTA.

In 2012 and 2013, ILRI distributed over 2000 accessions under 66 SMTAs (Table 1) to users in 21 countries. The SMTAs are filed in the ILRI genebank and are available on request. This forage germplasm will be used for forage research and development by ILRI's partners to improve livestock feeds for smallholder farmers.

Table 1 Germplasm shipments using the SMTA in 2012-2013

Provider: International Livestock Research Institute, Addis Ababa, Ethiopia
